APPENDIX A – Monthly Summary of Microbiological Test Results APPENDIX B – Monthly Summary of Operational Data

#### INTRODUCTION

Municipalities throughout Ontario have been required to comply with Ontario Regulation 170/03 made under the *Safe Drinking Water Act* (SDWA) since June 2003. The Act was enacted following recommendations made by Commissioner O'Conner after the Walkerton Inquiry. The Act's purpose is to protect human health through the control and regulation of drinking water systems. O. Reg. 170/03 regulates drinking water testing, use of licensed laboratories, treatment requirements and reporting requirements.

Section 11 of Regulation 170/03 requires the owner to produce an Annual Report. This report must include the following:

- 1. Description of system & chemical(s) used
- 2. Summary of any adverse water quality reports and corrective actions
- 3. Summary of all required testing
- 4. Description of any major expenses incurred to install, repair or replace equipment

This annual report must be completed by February 28th of each year.

Schedule 22 of the regulation also requires a Summary Report which must be presented & accepted by Council by March 31<sup>st</sup> of each year for the preceding calendar year.

The report must list the requirements of the Act, its regulations, the system's Drinking Water Works Permit (DWWP), Municipal Drinking Water Licence (MDWL), Certificate of Approval (if applicable), and any regulatory requirement the system <u>failed to meet</u> during the reporting period. The report must also specify the duration of the failure, and for each failure referred to, describe the measures that were taken to correct the failure.

The *Safe Drinking Water Act* (2002) and the drinking water regulations can be viewed at the following website: <u>http://www.e-laws.gov.on.ca</u>.

To enable the Owner to assess the rated capacity of their system to meet existing and future planned water uses, the following information is also required in the report.

- 1. A summary of the quantities and flow rates of water supplied during the reporting period, including the monthly average and the maximum daily flows,
- 2. A comparison of the summary to the rated capacity and flow rates approved in the systems approval, drinking water works permit or municipal drinking water licence or a written agreement if the system is receiving all its water from another system under an agreement.

The reports have been prepared by the Ontario Clean Water Agency (OCWA) on behalf of the Owner and presented to council as the 2022 Annual/Summary Report.

Englehart Drinking Water System

# Section 11 2022 ANNUAL REPORT

#### Section 11 - ANNUAL REPORT

#### **1.0 INTRODUCTION**

| Drinking-Water System Name:     | Englehart Drinking Water System          |
|---------------------------------|--|
| Drinking-Water System No.:      | 220000353                                |
| Drinking-Water System Owner:    | The Corporation of the Town of Englehart |
| Drinking-Water System Category: | Large Municipal, Residential System      |
| Period being reported:          | January 1, 2022 to December 31, 2022     |

Does your Drinking Water System serve more than 10,000 people? No

Is your annual report available to the public at no charge on a web site on the Internet? Yes at <a href="http://www.englehart.ca/">http://www.englehart.ca/</a>

Location where the report required under O. Reg. 170/03 Schedule 22 will be available for inspection.

Englehart Town Office 61 Fifth Avenue Englehart, Ontario POJ 1HO

#### Drinking Water Systems that receive drinking water from the Englehart Drinking Water System

The Englehart Drinking Water System provided drinking water to the Town of Englehart and five neighbouring distribution systems:

| 1. | Bradley Subdivision | DWS #: 260069927 |
|----|---------------------|------------------|
| 2. | First St North      | DWS #: 260078871 |
| 3. | Kap-kig-iwan Road   | DWS #: 260078650 |
| 4. | Bryans' Road        | DWS #: 260080574 |
| 5. | Brown's Road        | DWS #: 260078663 |
|    |                     |                  |

### The Annual Report was provided to all Drinking Water System owners that are connected to the Englehart Drinking Water System.

The Ontario Clean Water Agency prepared the 2022 Annual/Summary Report for the Englehart Drinking Water System and provided a copy to the system owner; the Town of Englehart. A copy was also provided to the Municipality of Charlton and Dack (Bradley Subdivision) and the following list of representatives for the remaining private lines:

#### Englehart Drinking Water System – 2022 Annual/Summary Report

Ms. Cindy Kirkbride First St North
Mr. Len Fisher Kap-kig-iwan Road
Ms. Marie Bryan Bryans' Road
Mr. Daryl Rowlandson Brown's Road

### Notification to system users that the Annual Report is available for viewing is accomplished through:

- Notice on the Town's Facebook page
- Notice on the Town's website
- Notice in the Municipal Office

#### 2.0 DESCRIPTION OF THE DRINKING WATER SYSYTEM (DWS No. 220000353)

The Englehart Drinking Water System is owned by the Corporation of the Town of Englehart and consists of a Class 1 water treatment subsystem and a Class 1 water distribution subsystem. The Ontario Clean Water Agency is the accredited operating authority and is designated as the Overall Responsible Operator for both the water treatment and water distribution facilities. It is a communal ground water well supply that services the Town of Englehart and five neighbouring distribution systems.

#### Raw Water Supply

The water treatment plant is located on 56 First Street in Evanturel Township in the district of Timiskaming and is supplied by two deep-drilled wells; Well No. 2 and Well No. 3.

Well No. 2 is located in a separate well house situated approximately 40 meters south of the treatment plant (approximately 52 m east of 1st Street and 15 m north of 6th Avenue). The well was constructed on July 27, 1948 is drilled to a depth of 89.3 meters. It consists of a stainless steel intake screen and a 400 mm diameter steel casing which reduces to a 200 mm diameter steel casing. It is equipped with vertical turbine pump and fixed-rate control system to pump at the maximum rate of 15.15 L/second. It includes a magnetic flow meter installed on the 100 mm diameter discharge line that directs water into the water treatment plant and has pump-to-waste provisions.

Well No. 3 is located in a separate well house situated approximately 20 meters east of the treatment plant (approximately 75 m east of 1st Street and 53 m north of 6th Avenue). The well was constructed on July 27, 1976 and is drilled to a depth of 90.5 meters. It consists of stainless steel intake screen and a 300 mm diameter casing that later reduces to a 150 mm diameter steel casing. It is equipped with vertical turbine pump and fixed-rate control system to pump at the maximum rate of 18.9 L/second. It also includes a magnetic flow meter installed on the 100 mm diameter discharge line that directs water into the water treatment plant and has pump-to-waste provisions.

#### Water Treatment

The production wells feed the main water treatment plant that has a maximum rated capacity of 2488 cubic meters per day ( $m^3/d$ ).

The process consists of a Filtronics Electromedia iron and manganese removal/pressure filtration system rated at 2998 m<sup>3</sup>/d. It consists of two reaction vessels; one for sodium hypochlorite and one for sodium bisulphite (which is currently not in use) and one filter tank. Sodium hypochlorite is injected prior to the reaction vessels. It is used as an oxidant for iron and manganese removal and as a disinfectant. Primary disinfection is achieved in the filter system and a 210 foot, 8 inch diameter contact pipe and is continuously monitored using a free chlorine residual analyzer. The system is also equipped with a turbidity analyzer, backwash flow meter and a filter backwash pump. The backwash residue discharges to the sanitary sewer. A treated water flow meter is located on the common header just downstream of the pressure filter system.

The sodium hypochlorite feed system consists of two (2) 1100 L chemical storage tanks with spill containment and two (2) flow paced chemical metering pumps with automatic backup/switch over.

#### Water Storage and Pumping Capabilities

The reservoir consists of a twin cell underground clear well with a 3 meter depth and an overall storage volume 1360 m<sup>3</sup>. Ammonia sulphate is added before entering the clearwell to produce a combined residual before entering the distribution system. The ammonia sulphate system consists of one 730 liter chemical tank with spill containment and two metering pumps (one duty and one shelf spare).

Each cell is vented and is accessible by an access hatch with ladder. A butterfly valve provides isolation of each cell if required. Two vertical turbine high lift pumps equipped with variable frequency drives (VFDs) direct water into the distribution system, each at a maximum rate of 37.8 L/second. A distribution water flow meter and a continuous total chlorine analyzer are installed on the high lift discharge header.

#### **Emergency Power**

A 150 kW diesel generator is located outside the water treatment building and can maintain all aspects of the operation during a power outage.

#### **Distribution System**

The Englehart Drinking Water System is classified as a Large Municipal Residential Drinking Water System and serves an estimated population of 1700 residents. Information regarding the age of the distribution system indicated that it was originally installed in 1914. The water mains consists primarily of 12, 10, 8, and 6 inch diameter ductile iron constructed pipe with approximately 50 fire hydrants connected to the system to aid in fire protection. Newly installed

sections of watermain consist of new PVC DR18 piping of the same diameter. Residential service connections consist of 1/2, 5/8, and 3/4 inch copper tubing. There are no off site water storage facilities in the system. Additionally, the distribution system does not receive water from other sources but it provides drinking-water to five neighbouring regulated drinking water systems (one small municipal residential system and four non-municipal year-round residential systems) as listed below:

| Distribution System | DWS #     | Owner/Operating Authority       | # of Service<br>Connections |
|---------------------|-----------|---------------------------------|-----------------------------|
| Town of Englehart   | 220000353 | Town of Englehart               | 750                         |
| Bradley Subdivision | 260069927 | Municipality of Charlton & Dack | 49                          |
| First St North      | 260078871 | Ms. Cindy Kirkbride             | 9                           |
| Kap-kig-iwan Road   | 260078650 | Mr. Len Fisher                  | 8                           |
| Bryan's Road        | 260080574 | Ms. Marie Bryan                 | 13                          |
| Brown's Road        | 260078663 | Mr. Daryl Rowlandson            | 12                          |

#### <u>Note</u>:

A Water Supply Agreement between the Corporation of the Town of Englehart and the Corporation of the Municipality of Charlton and Dack came into effect on August 3, 2016. The terms of the agreement allow the Town of Englehart to monitor and sample the Bradley Subdivision System as part of the Englehart System except for lead sampling and testing under Ontario Regulation 170/03, Section 15.1.

#### 3.0 LIST OF WATER TREATMENT CHEMICALS USED OVER THE REPORTING PERIOD

The following chemicals were used in the treatment process at the Englehart Water Treatment Plant.

- Sodium Hypochlorite Disinfection
- Ammonium Sulphate Chloramination
- Sodium Bisulphite available at the plant, but is currently not in use.

All treatment chemicals meet AWWA and NSF/ANSI standards.

#### 4.0 SIGNIFICANT EXPENSES INCURRED IN THE DRINKING WATER SYSTEM

OCWA is committed to maintaining the assets of the drinking water system and maintains a program of scheduled inspection and maintenance activities using a computerized Work Management System (WMS).

Significant expenses incurred in the drinking water system include:

• Replaced check valve on Well No. 3

• SAI Global Quality and Environmental Management System (QEM) surveillance and reaccreditation audits. Accreditation achieved on October 14, 2022.

### 5.0 DETAILS ON NOTICES OF ADVERSE TEST RESULTS AND OTHER PROBLEMS REPORTED TO & SUBMITTED TO THE SPILLS ACTION CENTER

Based on information kept on record by OCWA, Three (3) adverse water quality incidents were reported to the Ministry's Spills Action Centre in 2022.

| Date                                | AWQI No. | Details  |
|-------------------------------------|----------|--|
| March 1 <sup>st</sup> ,<br>2022     | 157901   | One (1) total coliform was detected in a drinking water sample collected on<br>February 27 <sup>th</sup> at 1844 hours (CCR = 1.09 mg/L). The sample was collected in<br>the Englehart distribution system from a hydrant at 45 - 1st Street in<br>response to a loss of pressure event.<br>Public Health Inspector allowed the re-sample to be collected from<br>plumbing near the hydrant location at the Ultramar (36 - 1st Street). An<br>upstream and downstream sample was also collected as per O. Regulation<br>170/03. Resamples were collected on March 1st. All sample results were<br>acceptable having zero total coliforms (TC) and <i>E. coli</i> .   |
|                                     |          |  |
| August 8 <sup>th</sup> ,<br>2022    | 159489   | One (1) total coliform was detected in a drinking water sample collected on<br>August 8 <sup>th</sup> at 1031 hours (CCR = 1.42 mg/L). The sample was collected in the<br>Englehart distribution system from 9 Sixth Avenue (Public Works).<br>Re-sample collected at site on August 10 <sup>th</sup> . An upstream and downstream<br>sample also collected as per O. Regulation 170/03. All sample results were<br>acceptable having zero total coliforms (TC) and <i>E. coli</i> .<br>Incident resolved on August 11, 2022.  |
| November<br>29 <sup>th</sup> , 2022 | 160834   | Category 2 watermain break on 1st First Street in the Town of Englehart.<br>The isolation of the break caused 75 homes on First Street to be without<br>pressure/water. The local Health Unit was notified and a precautionary boil<br>water advisory (BWA) was issued for the affected area.<br>After the repair was complete on November 29 <sup>th</sup> , the pressure was restored<br>and the area was flushed until acceptable combined chlorine residuals were<br>achieved. Two (2) sets of 3 bacteriological samples were collected<br>(upstream from the break was at the Ultramar Gas Station, the downstream<br>at Ace Hardware Store and near the site was at the WTP). Samples were<br>collected on November 30 <sup>th</sup> and December 1 <sup>st</sup> , 2022. All sample results<br>indicated no total coliforms or <i>E.coli</i> . The BWA was lifted on December 2 <sup>nd</sup><br>at 12:20 PM.<br>Incident resolved on December 2, 2022. |

#### 6.0 MICROBIOLOGICAL TESTING PERFORMED DURING THE REPORTING PERIOD

| Sample Type      | # of<br>Samples | Range of<br>E. coli Results<br>(min to max) | Range of<br>Total Coliform Results<br>(min to max) | # of HPC<br>Samples | Range of<br>HPC Results<br>(min to max) |
|------------------|-----------------|---|--|---------------------|---|
| Raw (Well No. 2) | 52              | 0 to 0                                      | 0 to 0   | N/A                 | N/A                                     |
| Raw (Well No. 3) | 52              | 0 to 0                                      | 0 to 0   | N/A                 | N/A                                     |
| Treated          | 52              | 0 to 0                                      | 0 to 0   | 52                  | < 10 to 40                              |
| Distribution     | 156             | 0 to 0                                      | 0 to 1*  | 52                  | < 10 to 100                             |

#### Summary of Microbiological Data

Maximum Allowable Concentration (MAC) for *E. coli* = 0 Counts/100 mL

MAC for Total Coliforms = 0 Counts/100 mL

"<" denotes less than the laboratory's method detection limit

">" denotes greater than the laboratory's method detection limit

#### Notes:

- 1. One microbiological sample is collected and tested each week from the raw (each well) and treated water supply. A total of three microbiological samples are collected and tested each week from the Englehart distribution system which includes one sample from the Bradley Subdivision. At least 25% of the distribution samples must be tested for HPC bacteria.
- 2. \*August 8 One (1) total coliform detected in the distribution system at the Public Works Department (AWQI No. 159489)

Refer to Appendix A for a monthly summary of microbiological test results.

#### 7.0 OPERATIONAL TESTING PERFORMED DURING THE REPORTING PERIOD

#### Summary of Raw Water Turbidity Data

| Parameter              | # of Samples | Range of Results<br>(min to max) | Unit of Measure |  |
|------------------------|--------------|----------------------------------|-----------------|--|
| Turbidity (Well No. 2) | 26           | 0.31 to 3.78                     | NTU             |  |
| Turbidity (Well No. 3) | 26           | 0.21 to 2.81                     | NTU             |  |

**Note:** Samples are required once every month.

#### **Continuous Monitoring in the Treatment Process**

| Parameter              | # of Samples | Range of Results<br>(min to max) | Unit of<br>Measure | Standard |
|------------------------|--------------|----------------------------------|--------------------|----------|
| Free Chlorine Residual | 8760         | 0.85 to 5.00                     | mg/L               | СТ       |

#### Notes:

1. For continuous monitors 8760 is used as the number of samples.

 CT is the concentration of chlorine in the water times the time of contact that the chlorine has with the water. It is used to demonstrate the level of disinfection treatment in the water. CT calculations are performed for the Englehart water plant if the free chlorine residual level drops below 0.85 mg/L to ensure primary disinfection is achieved. The CT calculation used to ensure primary disinfection is achieved at the water treatment plant was updated as per Ministry's recommendations. This resulted in a change to the low free chlorine alarm set point from 0.85 mg/L to 0.90 mg/L. Starting in December 2022, if the free chlorine residual level drops below 0.90 mg/L, a CT calculation is performed.

#### Summary of Chlorine Residual Data in the Distribution System

| Parameter                  | # of Samples | Range of Results<br>(min to max) | Unit of<br>Measure | Standard                  |
|----------------------------|--------------|----------------------------------|--------------------|---------------------------|
| Combined Chlorine Residual | 364          | 0.82 to 2.10                     | mg/L               | <u>&gt;</u> 0.25 and <3.0 |

**Note:** A total of seven operational checks for chlorine residual in the distribution system are collected each week. Four (4) samples are tested one day and three (3) on a second day. The sample sets are collected at least 48-hours apart and samples collected on the same day are from different locations.

Refer to <u>Appendix B</u> for a monthly summary of the above operational data.

Summary of Nitrate & Nitrite Data (sampled at the plant's point of entry into the distribution every quarter)

| Date of Sample | Nitrate Result<br>Value | Nitrite Result<br>Value | Unit of Measure | Exceedance |
|----------------|-------------------------|-------------------------|-----------------|------------|
| January 10     | 0.2                     | < 0.01                  | mg/L            | No         |
| April 11       | 0.2                     | < 0.01                  | mg/L            | No         |
| July 11        | 0.1                     | < 0.01                  | mg/L            | No         |
| October 11     | 0.2                     | < 0.01                  | mg/L            | No         |

Maximum Allowable Concentration (MAC) for Nitrate = 10 mg/L

MAC for Nitrite = 1 mg/L

#### Summary of Total Trihalomethane Data (sampled in the distribution system every quarter)

| Date of Sample | Result Value | Unit of<br>Measure | Running Average | Exceedance |
|----------------|--------------|--------------------|-----------------|------------|
| January 10     | 17           | ug/L               |                 |            |
| April 11       | 30.3         | ug/L               | 27.0            | No         |
| July 11        | 32.7         | ug/L               | 27.0            | NO         |
| October 11     | 28.1         | ug/L               | _               |            |

Maximum Allowable Concentration (MAC) for Total Trihalomethanes = 100 ug/L (Four Quarter Running Average)

#### Summary of Total Haloacetic Acid Data (sampled in the distribution system)

|                | •            |                    | , ,             |            |  |
|----------------|--------------|--------------------|-----------------|------------|--|
| Date of Sample | Result Value | Unit of<br>Measure | Running Average | Exceedance |  |
| January 10     | 22           | ug/L               |                 |            |  |
| <br>April 11   | 9            | ug/L               | <br>            | Ne         |  |
| <br>July 11    | 36           | ug/L               | - 22.5          | INO        |  |
| <br>October 11 | 23           | ug/L               |                 |            |  |

Maximum Allowable Concentration (MAC) for Total Haloacetic Acids = 80 ug/L (Four Quarter Running Average)

#### Summary of Most Recent Lead Data under Schedule 15.1

(applicable to the following drinking water systems; large municipal residential systems, small, municipal residential systems, and non-municipal year-round residential systems)

The Englehart Drinking Water System was eligible to follow the "Exemption from Plumbing Sampling" as described in section 15.1-5(9) and 15.1-5(10) of Schedule 15.1 of Ontario Regulation 170/03. The exemption applies to a drinking water system if, in two consecutive periods at reduced sampling, not more than 10% of all samples from plumbing exceed the maximum allowable concentration (MAC) of 10 ug/L for lead. As such, the system was required to test for total alkalinity and pH in two distribution sample collected during the periods of December 15 to April 15 (winter period) and June 15 to October 15 (summer period). This testing is required in every 12-month period with lead testing in every third 12-month period.

Lead samples were last collected in 2020 and results were well below the MAC. Two rounds of alkalinity and pH testing were carried out on March 7<sup>th</sup> and September 14<sup>th</sup> of 2022. Results are summarized in the table below.

| Date of Sample                               | # of<br>Samples | Field pH<br>(min to max) | Field Temperature (°C)<br>(min to max) | Alkalinity (mg/L)<br>(min to max) | <b>Lead</b> (ug/L)<br>(min to max) |  |  |
|--|-----------------|--------------------------|--|-----------------------------------|------------------------------------|--|--|

#### **Summary of Lead Data** (sampled in the Englehart distribution system)

Note: Next lead sampling scheduled for 2023

The Bradley Subdivision Distribution System was also eligible to follow the "Exemption from Plumbing Sampling" as described in section 15.1-5(9) and 15.1-5(10) of Schedule 15.1 of Ontario Regulation 170/03.

Lead samples were last collected in 2020 and results were well below the MAC. Two rounds of alkalinity and pH testing were performed on one distribution sample collected on March 7<sup>th</sup> and September 14<sup>th</sup> of 2022. Results are summarized in the table below.

#### **Summary of Lead Data** (sampled in the Bradley Subdivision distribution system)

| Date of Sample | # of<br>Samples | Field pH | Field Temperature<br>(°C) | Alkalinity<br>(mg/L) | Lead<br>(ug/L) |
|----------------|-----------------|----------|---------------------------|----------------------|----------------|
| March 7        | 1               | 7.48     | 6.6                       | 250                  | N/A            |
| September 14   | 1               | 7.86     | 12.3                      | 239                  | N/A            |

Note: Next lead sampling scheduled for 2023

#### Most Recent Schedule 24 Organic Data Tested at the Water Treatment Plant

Note: Sample required every 36 months (sample date = October 5, 2020). Next sampling scheduled for October 2023

### Inorganic or Organic Test Results that Exceeded Half the Standard Prescribed in Schedule 2 of the Ontario Drinking Water Quality Standards.

No inorganic or organic parameter(s) listed in Schedule 23 and 24 of Ontario Regulation 170/03 exceeded half the standard found in Schedule 2 of the Ontario Drinking Water Standard (O. Reg. 169/03) during the reporting period.

| Date of Sample             | # of<br>Samples | Result Value | Unit of<br>Measure | Standard | Exceedance |  |
|----------------------------|-----------------|--------------|--------------------|----------|------------|--|
| October 5, 2020            | 1               | 44.4         | mg/L               | 20       | Yes        |  |
| October 9, 2020 (resample) | 1               | 46.7         | mg/L               | 20       | Yes        |  |

**Note:** Sample required every 60 months. Next sampling scheduled for October 2025

The aesthetic objective for sodium in drinking water is 200 mg/L at which it can be detected by a salty taste. It is required that the local Medical Officer of Health be notified when the concentration exceeds 20 mg/L so that persons on sodium restricted diets can be notified by their physicians. The adverse sodium result was reported to Ministry's SAC and the Timiskaming

Health Unit on October 9, 2020 as required under Schedule 16 of O. Reg. 170/03 (AWQI# 152519).

| Date of Sample  | e # of<br>Samples |      | Unit of<br>Measure | Standard | Exceedance |  |
|-----------------|-------------------|------|--------------------|----------|------------|--|
| October 5, 2020 | 1                 | 0.42 | mg/L               | 1.5      | No         |  |

Note: Sample required every 60 months. Next sampling scheduled for October 2025

#### Additional Testing Performed in Accordance with an Approval, Order or Legal Instrument

Condition 5 (5.1) of Schedule C to Municipal Drinking Water Licence (MDWL) #209-101 issued on November 23, 2021 requires sampling, testing and monitoring of Nitrosodimethylamine (NDMA). The sample is to be collected each quarter from the farthest point in the distribution system and not exceed the maximum allowable concentration (MAC) of 0.009 ug/L.

#### **Summary of NDMA Data** (sampled in the distribution system every quarter)

| Date of Sample | NDMA Result | Unit of Measure | Exceedance |
|----------------|-------------|-----------------|------------|
| February 17    | 0.0030      | ug/L            | No         |
| April 20       | < 0.0008    | ug/L            | No         |
| July 19        | < 0.0009    | ug/L            | No         |
| October 11     | < 0.0009    | ug/L            | No         |
| October 11     | < 0.0009    | ug/L            | No         |

Maximum Allowable Concentration (MAC) for NDMA = 0.009 ug/L

Englehart Drinking Water System

Schedule 22 2022 SUMMARY REPORT FOR MUNICIPALITIES

#### **Schedule 22 - SUMMARY REPORTS FOR MUNICIPALITIES**

#### 1.0 INTRODUCTION

| Drinking-Water System Name:                  | Englehart Drinking Water System        |
|--|--|
| Municipal Drinking Water Licence (MDWL) No.: | 209-101-5 (issued November 23, 2021)   |
| Drinking Water Work Permit (DWWP) No.:       | 209-201-3 (issued November 23, 2021)   |
| Permit to Take Water (PTTW) No.:             | P-300-5072679672 (issued June 3, 2020) |
| Period being reported:                       | January 1, 2022 to December 31, 2022   |

#### 2.0 REQUIREMENTS THE SYSTEM FAILED TO MEET

According to information kept on record by OCWA, the Englehart Drinking Water System has complied with all the requirements set out in the system's MDWL, its DWWP, the Act and its Regulations.

However, it should be mentioned that, three (3) adverse water quality incidents were reported to the Ministry's Spills Action Center during the reporting period. Refer to Section 5.0 – Details on Notices of Adverse Test Results and Other Problems Reported to & Submitted to the Spills Actions Center on page 6 of this report for details.

#### 3.0 SUMMARY OF FLOWS AND COMPARISON TO REGULATORY LIMITS

#### Flow Monitoring

MDWL No. 209-101 requires the owner to install a sufficient number of flow measuring devices to permit the continuous measurement and recording of:

- the flow rate and daily volume of treated water that flows from the treatment subsystem the distribution system, and
- the flow rate and daily volume of water that flows into the treatment subsystem.

The flow monitoring equipment identified in the MDWL is present and operating as required. These flow meters are calibrated on an annual basis as specified in the manufacturers' instructions.

#### Water Usage

The following water usage tables summarize the quantities and flow rates of water taken and produced during the 2022 reporting period, including total monthly volumes, average monthly volumes, maximum monthly volumes, and maximum flow rates.

#### Raw Water

#### 2022 - Monthly Summary of Water Takings from the Source (Well No. 2 and Well No. 3)

Regulated by Permit to Take Water (PTTW) #P-300-5072679672 effective June 3, 2020

#### Well No. 2

#### Raw Water Total - Combined Water Taking (Well No. 2 and Well No. 3)

|  | Jan   | Feb   | Mar   | Apr   | May   | Jun   | Jul   | Aug   | Sep   | Oct   | Nov   | Dec   | Year to<br>Date |
|--|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-----------------|
| Total Volume (m <sup>3</sup> )                           | 23792 | 21312 | 25430 | 23100 | 28018 | 29270 | 31315 | 31896 | 27136 | 26711 | 23688 | 24392 | 316060          |
| Average Volume (m <sup>3</sup> /d)                       | 767   | 761   | 820   | 770   | 904   | 976   | 1010  | 1029  | 905   | 862   | 790   | 787   | 866             |
| Maximum Volume (m³/d)                                    | 1095  | 1331  | 1197  | 1656  | 1186  | 1795  | 1227  | 1278  | 1206  | 1125  | 1008  | 1009  | 1795            |
| PTTW - Maximum Allowable<br>Volume (m <sup>3</sup> /day) | 2796  | 2796  | 2796  | 2796  | 2796  | 2796  | 2796  | 2796  | 2796  | 2796  | 2796  | 2796  | 2796            |

The system's Permit to Take Water #P-300-5072679672 allows the Town to withdraw water at the following rates:

| Well No. 2:                  | 1204.69 m <sup>3</sup> /day | 909 L/minute  |
|------------------------------|-----------------------------|---------------|
| Well No. 3                   | 1591.10 m <sup>3</sup> /day | 1727 L/minute |
| Total Combined Daily Volume: | 2795.79 m <sup>3</sup> /day |               |

A review of the raw water flow data indicates that the system did not exceed the maximum allowable volumes or maximum flow rates during the reporting period.

#### Treated Water

#### 2022 - Monthly Summary of Treated Water Supplied to the Distribution System

Regulated by Municipal Drinking Water Licence (MDWL) #209-101 (issue 5), issued November 23, 2021

|   | Jan   | Feb   | Mar   | Apr   | May   | Jun   | Jul   | Aug   | Sep   | Oct   | Nov   | Dec   | Year to<br>Date |
|---|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-----------------|
| Total Volume (m <sup>3</sup> )                        | 21787 | 20171 | 23774 | 21466 | 26358 | 27627 | 29274 | 29941 | 24975 | 24739 | 21667 | 22274 | 294053          |
| Average Volume (m <sup>3</sup> /d)                    | 703   | 720   | 767   | 716   | 850   | 921   | 944   | 966   | 833   | 798   | 722   | 719   | 806             |
| Maximum Volume (m³/d)                                 | 1040  | 828   | 925   | 1543  | 1338  | 1715  | 1164  | 1170  | 1035  | 1063  | 907   | 854   | 1715            |
| MDWL/C of A - Rated Capacity<br>(m <sup>3</sup> /day) | 2488  | 2488  | 2488  | 2488  | 2488  | 2488  | 2488  | 2488  | 2488  | 2488  | 2488  | 2488  | 2488            |

Schedule C, Section 1.0 (1.1) of MDWL No. 209-101 states that the maximum daily volume of treated water that flows from the treatment subsystem to the distribution system shall not exceed 2488 m<sup>3</sup>/day. The Englehart DWS complied with this limit having a recorded maximum volume of 1715 m<sup>3</sup>/day on June 8<sup>th</sup>, which represents 68.9% of the rated capacity.

Figure 1 compares the average and maximum flow rates into the distribution system to the rated capacity of the system identified in the MDWL.

#### Figure 1: 2022 - Comparison of Treated Water Flows to the Rated Capacity

The following information is provided to enable the Owner to assess the capability of the system to meet existing and future water usage needs.

#### Summary of System Performance

| Rated Capacity of the Plant (MDWL)   | 2,488 m³/day              |                              |
|--------------------------------------|---------------------------|------------------------------|
| Average Daily Flow for 2022          | 806 m³/day                | 32.4 % of the rated capacity |
| Maximum Daily Flow for 2022          | 1,715 m <sup>3</sup> /day | 68.9 % of the rated capacity |
| Total Treated Water Produced in 2022 | 294,053 m <sup>3</sup>    |                              |

#### **Historical Flows**

#### Figure 2: Englehart Water Treatment System - Average Treated Water Flows from 2018 to 2022

#### CONCLUSION

The water quality data collected in 2022 demonstrates that the Englehart drinking water system provided high quality drinking water to its users.

The system was able to operate in accordance with the terms and conditions of the Permit to Take Water and in accordance with the rated capacity of the licence while meeting the community's demand for water use.

All Adverse Water Quality Incidents were reported to the Ministry's Spills Action Center and the corrective actions were completed as required and any non-compliances that were identified were resolved as soon as possible.

NOTES: \* CT is the concentration of chlorine in the water times the time of contact that the chlorine has with the water. It is used to demonstrate the level of disinfection treatment in the water. CT calculations were performed for the Englehart water plant if the free chlorine residual level drops below 0.85 mg/L. As per Ministry's recommendations, the CT calculation was updated to change the free chlorine residual alarm set point from 0.85 mg/L to 0.90 mg/L. Starting in December 2022, if the free chlorine residual level drops below 0.90 mg/L, a CT calculation is performed.
